SERH

SAFETY EQUIPMENT RELIABILITY HANDBOOK

Keep your reliability data up to date.

Benefit from newly added equipment items. Ensure that you receive Safety Equipment Reliability Handbook database updates today!

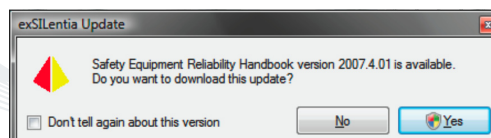

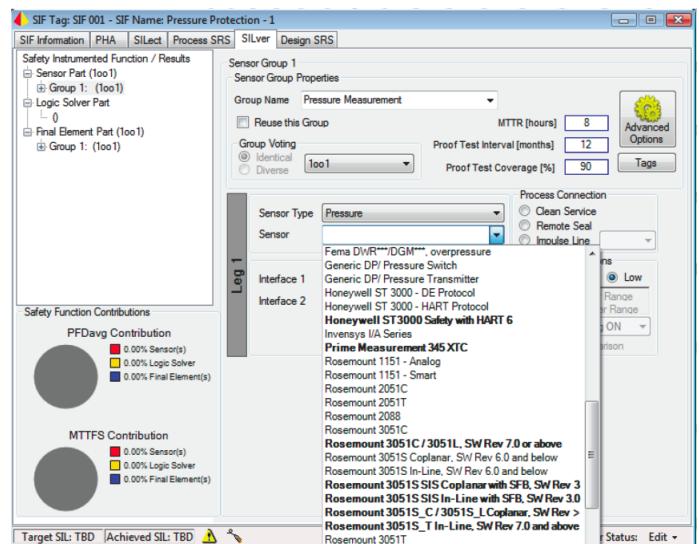

exSILentia® provides you with advanced SIL verification concepts to easily, quickly, and accurately model your Safety Instrumented Functions. This is a significant time saver when you are ensuring functional safety standard compliance.

The by far biggest SIL verification time saver is

the embedded Safety Equipment Reliability Handbook (SERH) database. The SERH database allows you to simply select an equipment item from a dropdown list without having to worry about the specific reliability data for that equipment item. Comparing the effect on your SIF performance with different equipment items is also a matter of changing your dropdown box selection.

Using the embedded Safety Equipment Reliability Handbook database gives you increased confidence in your SIL verification and ensures there is virtually no equipment reliability research you have to do.

With your initial purchase of exSILentia® you receive one full year of Safety Equipment Reliability Handbook database updates. Whenever you launch the exSILentia® tool and you are connected to the internet the exSILentia update utility will check if a newer version of the SERH database is available. If so, you will receive a message as displayed underneath.

exSILentia: Safety Equipment Reliability Handbook Updates

The first edition of the Safety Equipment Reliability Handbook consisted of roughly 200 pages of reliability data. The second edition was over 500 pages thick, and the third edition, released in 2007 was published in three separate volumes. This is a clear indication of the continuous growth of the SERH database.

How to ensure that you receive Safety Equipment Reliability Handbook database updates?

In exSILentia click on Help – About. The About dialog box will show you when your SERH update subscription expires. If your subscription has expired or is about to expire go to the exida web store, click on the software link, and purchase an additional year or two of SERH updates.
